The Carnival Rides

My friend and I went to the carnival. There were lots of rides there. We bought forty tickets! The first ride we went on was the Gravitron. Then we went down a tall slide. Third we rode on the Tilt-A-Whirl. Fourth we decided to ride the roller coaster. It was the only roller coaster at the carnival and I felt a little nervous while we waited for our turn. My friend and I sat in the front car and pulled the lap bar towards our stomachs. "Ready, set, go!" we heard the worker say as we were jerked back as the ride started. The twists and turns were scary and we whirled around the loops. After it was finished, I was relieved and ready to be done at the carnival.

Travel to Outer Space

I wonder what it would be like to travel to outer space. Mercury and Venus are probably very hot since they are the closest to the sun. Mars, the red planet, would be cool to visit. Then I would have to worry about getting past the asteroid belt in order to get to Jupiter. I would definitely want to investigate the rings around Saturn and see what they are really made of. Beyond Saturn are Uranus and Neptune. I can't even imagine how freezing those planets must be. Last there's Pluto, which is no longer considered a planet. But traveling through outer space would be neat. I would enjoy seeing all the stars everywhere as I peer out the window of my rocket ship. I would like to travel through our solar system. Would you?
